3. A vSphere Administrator notices that a virtual machine is performing poorly, and upon investigation has observed the following:

- The guest operating system does not appear to be utilizing the resources that have been assigned to it
- the ESX1 host has many other VMs present and utilization is high

What is the first step in troubleshooting this problem?

- A. Shut down the virtual machine and double the amount of vCPU and RAM assigned.
- B. Shut down the virtual machine and set the number of vCPU as high as possible.
- C. Migrate the virtual machine to an ESX1 host with more resources available.
- D. Configure the virtual machine with CPU and Memory limits.

Answer: C
