Exam : 300-510

Title : Implementing Cisco Service
Provider Advanced Routing
Solutions (SPRI)

Version : DEMO

1.CORRECT TEXT

Guidelines **Topology** Tasks

Configure and verify an OSPF neighbor adjacency between R1 and R2 in OSPF area 0 according to the topology to achieve these goals:

1. R1 pings the Loopback0 interface of R2. Use interface-level configuration to complete this task.
2. R2 pings the Loopback0 interface of R1. Use interface-level configuration to complete this task.
3. R2 receives a single summary route 172.16.100.0/22 for networks 172.16.100.0/24, 172.16.101.0/24, and 172.16.103.0/24.

2.Which statement about enabling segment routing for IGP is true?

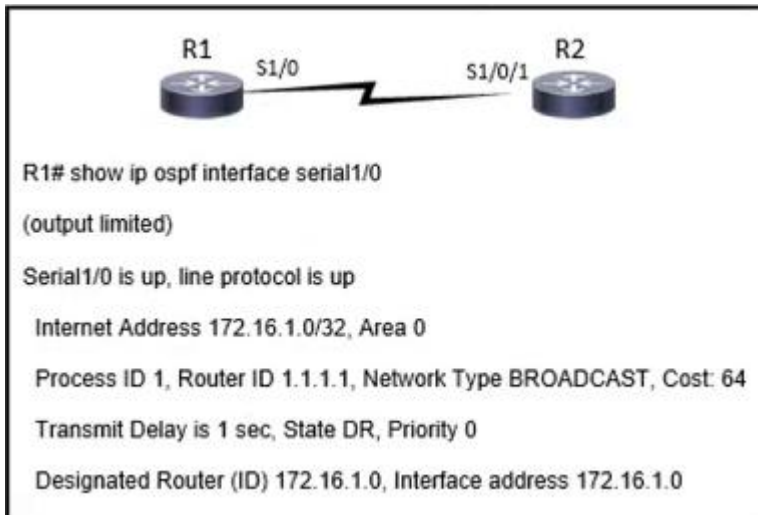

- A. Segment routing must first be enabled under then routing process and then globally
- B. Segment routing must first be enabled globally and then under the routing process
- C. Segment routing can be enabled only under the routing process
- D. Segment routing can be enabled only globally

Answer: B

Explanation:

Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/seg_routing/configuration/xr-16-6/segrrt-xr-16-6-book/sr-ospfv2-node-sid.html

3.Refer to the exhibit.

While configuring router 2 with all the default values, a network engineer cannot see any route received in router 1.

How should the engineer solve the issue?

- A. Set up a priority different than 0 in the interface.
- B. Modify the router ID to be the interface IP on the serial.
- C. Modify the IP address or mask of the interface to a valid one.
- D. Set the network type in S1/0 to point-to-point.

Answer: C

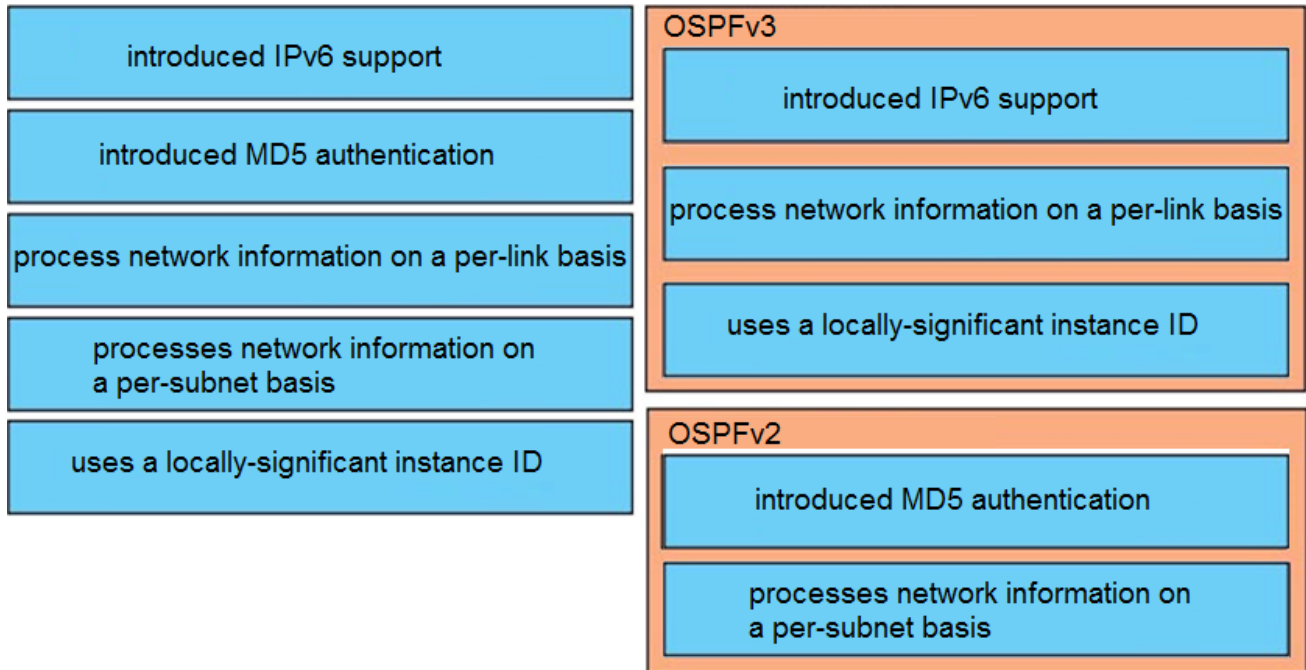

4.DRAG DROP

Compare different features between OSPFv2 and OSPFv3.

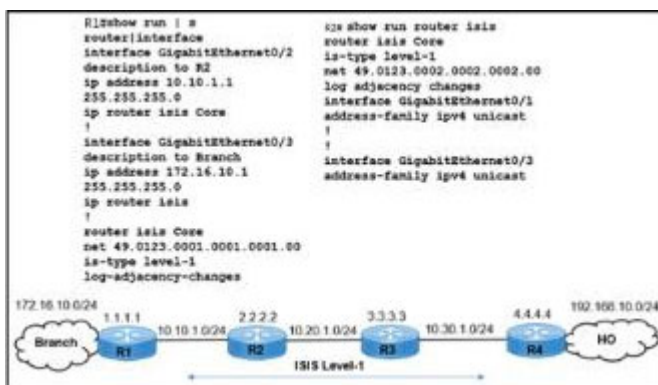

Drag and drop the descriptions of OSPF from the left onto the correct OSPF versions on the right.

introduced IPv6 support	OSPFv3
introduced MD5 authentication	
process network information on a per-link basis	
processes network information on a per-subnet basis	
uses a locally-significant instance ID	OSPFv2

Answer:

5.Refer to the exhibit.

Users at the branch office on R1 reported issue with an application at the home office on R4.

While troubleshooting the issue, a network engineer determined that

- ⇒ The branch-office users can connect to the home office.
- ⇒ The IS-IS adjacencies between R1 and R2 and R1 and the branch office are up.
- ⇒ Traffic from R1 to the R2 10.20.1.0/24 network is moving normally.
- ⇒ The application at the home office is experiencing packet drops on the connection to the Branch, and R3 cannot reach the R1 172.16.10.0/24 network.

Which action resolves the issues?

- A. Redistribute static connected routes in IS-IS on router R1.
- B. Configure the IS-IS core instance on the R1 GigabitEthernet0/3 interface.
- C. Redistribute static connected routes in IS-IS on router R4.
- D. Configure the IS-IS core instance on the R2 GigabitEthernet0/1 interface.

Answer: B
