Exam : **C2090-560**

Title : PureData System for Analytics v7.1

Version : DEMO

1.Which statement regarding temporary tables is TRUE?

A. They are limited to 1 terabyte in size

B. They may include a DISTRIBUTE ON clause

C. They are limited to 16 tables per user per database

D. They will be included in any nzbackup of the database

Answer: B

2.Which procedural logic is NOT supported by NZPLSQL?

A. Scrollable cursors

B. Looping (while, for)

C. Conditionals (if, else)

D. Returning a scalar result or result set

Answer: A

3.Which of the following properties about the rowid column is FALSE?

A. At installation the initial rowid value is 100,000

B. Rowid values are sequential across each table

C. The system automatically assigns values for the column

D. The host assigns a range of sequential rowids to each SPU

Answer: C

4.Columns in a table may be zone mapped. How are those columns chosen?

A. They are automatically selected by the system

B. They are always based on the samecolumns as the table's distribution key

C. They are added via the ALTER TABLE ADD INDEX(column_name) statement

D. They are added via the ALTER TABLE ADD ZONEMAP(column_name) statement

Answer: A

5.Select the statement about the ENABLE_USER_SCHEMA variable that is TRUE in a system using Netezza Performance Server Release 7.0.3 or higher.

A. The default value for this variable is FALSE

B. This variable controls whether the system allows users to create and manage multiple schemas

C. If the variable is set to TRUE and the user does not specify a schema, the system will connect to the default schema for the database

D. If the variable is set to FALSE and the user does not specify a schema, the system will connect to a schema that matches the database user name

Answer: B
