

Exam : C2150-463

Title : IBM InfoSphere Guardium

Version : DEMO

- 1. Which consideration is true for a Vulnerability Assessment (VA) deployment?
- A. Collectors running VA cannot also perform database monitoring.
- B. Each collector can run up to 20 Vulnerability Assessments simultaneously.
- C. S-TAP must be running on the database server before VA is run for a database on that server.
- D. There is a need to create an account with appropriate privileges on the database for VA to work.

Answer: D

2. Which Guardium appliance cannot be managed.?

- A. S-TAP
- B. Collector
- C. Aggregator
- D. Central manager
- Answer: D

3.When planning the deployment for Data Activity Monitoring (DAM) there is a need to determine the location of the various Guardium solution components (I.e. Agents, appliances).

Which statement is correct?

A. S-TAP agents need to reside in the same data center the aggregators reside in.

- B. Collectors can report to aggregators that are located in data centers other then their own.
- C. Collectors can reside anywhere in the customer network regardless of database server location.

D. Aggregators need to reside in the same data center the collectors that report to them (Aggregator) reside.

Answer: B

4. When sizing a Vulnerability Assessment solution, what is the recommendation for calculating the number of collectors needed?

A. One collector for every 30K PVU.

- B. One collector for every data center.
- C. One collector for every 35 database servers.
- D. One collector for every 255 database instances.

Answer: D

5.What are the mechanisms used by UNIX S-TAP to capture database traffic?

- A. K-TAP, A-TAP, and PCAP
- B. K-TAP, LHMON, and PCAP
- C. PCAP, DB2TAP, and K-TAP
- D. A-TAP, Shared Memory Driver, and K-TAP

Answer: A
