Exam : **COH350**

Title : **Cohesity Security Specialist**

Version : **DEMO**

1.Which authentication mechanism allows users to access the Cohesity platform using their corporate credentials without needing separate login information?

- A. Multi-Factor Authentication (MFA)
- B. Single Sign-On (SSO)
- C. Local Authentication
- D. Token-Based Access

Answer: B

2.An organization wants to implement a comprehensive data security strategy using Cohesity solutions. Which combination of features provides the strongest protection?

- A. Deduplication and compression
- B. Encryption, RBAC, and immutable storage
- C. Snapshot scheduling and tiering
- D. Storage expansion and replication

Answer: B

3.An administrator wants to block unauthorized protocols from accessing the Cohesity cluster. Which approach should be used?

- A. Disable all security policies
- B. Configure protocol access control policies
- C. Enable all ports for redundancy
- D. Remove firewall rules entirely

Answer: B

4.Which step should be performed first when responding to a suspected cybersecurity incident in a Cohesity environment?

- A. Delete all backup data immediately
- B. Identify and contain the affected systems
- C. Disable all monitoring tools
- D. Restore data without verification

Answer: B

5.Which authentication method enables centralized identity management and simplifies user access to the Cohesity platform?

- A. Local authentication
- B. Single Sign-On (SSO)
- C. Snapshot replication
- D. Deduplication

Answer: B
