Exam : **NS0-920**

Title : NetCache Deployment
Options & Streaming

Version : V4.24

1. What version(s) of SSH does NetCache support?

- A. Versions 1 and 2
- B. Version 2 only
- C. Versions 2 and 3
- D. Version 3 only
- E. None

Answer:A

2. Which set of acceleration rules will best allow for acceleration of a Windows Media Server that uses MMS and HTTP

for transport protocols?

NetCache IP: 10.1.2.3 netcache.server.com

Streaming Server IP: 10.1.2.5 m.server.com

A. streaming.acceleration.rules=\\

```
10.1.2.3 1755 * * 10.1.2.5 1755 m.server.com *
```

```
10.1.2.3 80 * * 10.1.2.5 80 m.server
```

```
\\
```

B. config.streaming.acceleration.rules=\\

```
10.1.2.3 1755 * * 10.1.2.5 1755 m.server.com *
```

```
\\
```

```
config.http.acceleration.rules=\\
```

```
10.1.2.3 80 * * 10.1.2.5 80 m.server.com *
```

```
\\
```

C. config.acceleration.rules=\\

```
mms 10.1.2.3 10.1.2.5 netcache.server.com m.server.com
```

```
http 10.1.2.3 10.1.2.5 netcache.server.com m.server.com
```

```
\\
```

D. config.streaming.acceleration.rules=\\

```
10.1.2.3 554 * * 10.1.2.5 554 m.server.com *
```

10.1.2.3 80 * * 10.1.2.5 80 m.server.com *

\\

Answer:A

3. What happens if you assign a service group ID of 4 on one NetCache appliance, and you assign a service group ID of 2 on another NetCache appliance?

- A. The two groups will load balance between each other.
- B. The WCCP router will automatically group the two together.
- C. Each NetCache appliance will join a different service group.
- D. The NetCache appliances use only the ID assignment for internal information, so there is no effect.

Answer: C

4. Which three are true about WCCP? (Choose 3)

- A. WCCP service groups must support a single protocol.
- B. WCCP service groups can consist of one or more routers or proxy-cache servers.
- C. WCCP service groups must be defined with the same settings.
- D. Traffic redirection and distribution are based on logical WCCP service groups.

Answer: BCD

5. What is the purpose of the "Here I Am" message?

- A. It identifies the NetCache appliance as the router.
- B. It identifies the service group membership.
- C. It announces that the NetCache appliance is available after a shutdown.
- D. It identifies that the NetCache appliance has received a request.

Answer: B

6. When traffic is tunneled, the NetCache appliance can take which two actions? (Choose 2)

- A. It can be used with manually configured browsers.
- B. It passes specified types of nonstandard traffic through without caching it.
- C. It examines the source and destination information, and caches the resulting objects.

D. It receives requests and allows or denies based on ACLs.

Answer: BD

7. When is information recorded into the Streaming Access log?

A. When the client streaming connection is opened.

B. Within 500 ms of connect.

C. Throughout the streaming session.

D. When the client streaming connection is closed.

Answer: D

8. When you have a Digital Rights Management (DRM) streaming, authentication is performed between which two devices?

A. HTTP server and client player

B. streaming media server and client player

C. authentication server and router

D. domain controller and streaming media server

Answer: B

9. A list of HTTP headers returned to a client for a cache hit on a stream may be viewed using the _____.

A. smstats command

B. sysstat command

C. Streaming Details log

D. object command

Answer: D

10. Bandwidth allocation rules can be used to optimize streaming performance in which three ways?
(Choose 3)

A. They can allocate bandwidth by user and group.

B. They can manage NetCache bandwidth utilization to ensure bandwidth for other uses.

C. They can allocate bandwidth based on CPU and memory usage.

D. They can restrict or deny connections.

Answer: ABD
